

Inventory Methodology

PWS Name: Worthington Municipal Water Works

PWSID: KY0450478

Enter Date Last Updated: **10/16/24**

Purpose of this worksheet: For water systems to document the methods and resources they used to develop and update their inventory.

Part 1: Historical Records Review

Type of Record	1) Describe the Records Reviewed for Your Inventory. 2) Indicate Your Level of Confidence (e.g. , Low, Medium, or High). 3) If a code system was applied to record types, describe here.
1. Previous Materials Evaluation <i>Example: Locations of Tier 1 lead tap sampling locations that are served by a lead service line.</i>	No previous materials evaluation records were found by the staff. There is a high level of confidence that records will not be found.
2. Construction Records and Plumbing Codes <i>Examples: Local ordinance adopting an international plumbing code. Permits for replacing lead service lines.</i>	There were no local codes or ordinances to mandate use of certain materials for service line connections. Plumbing permits through KY Public Health have been required since 1960.
3. Water System Records <i>Examples: Capital improvement plans. Standard operating procedures. Engineering standards.</i>	There were very few system records that were useful to determine the service line material. Even the billing system could not produce reports to even identify the post-88 meter sets.

<p>4. Distribution System Inspections and Records <i>Examples: Distribution system maps. Tap cards. Service line repair/replacement records. Inspection records. Meter installation records.</i></p> <p>There is minimal Pre-1988 maps and engineering construction records available. We had a low confidence in the records that were found so we conducted visual inspections at the meter box. The service line status was recorded on the meter reading cards.</p>	<p>5. Other Records</p>
<p>N/A</p>	

Part 2: Identifying Service Line Material During Normal Operations

1. During which normal operating activities are you collecting information on service line material? Check all that apply.

- Water meter reading
- Water meter repair or replacement
- Service line repair or replacement
- Water main repair or replacement
- Backflow prevention device inspection
- Other

If "Other", please explain:

2. Did you develop or revise standard operating procedures to collect service line material information during normal operation? *No*

If "Yes", please describe:

Part 3: Service Line Investigations

1. Identify the service line investigation methods your system used to prepare the inventory (check all that apply). If a water system chooses an investigation method not specified by the state under 40 CFR §141.84(a)(3)(iv), state approval is required. See EPA document "Guidance for Developing and Maintaining a Service Line Inventory" (August, 2022) for a description of the various water quality sampling options. **Note that investigations are not required by the LCR but can be used by systems to assess accuracy of historical records and gather information when service line material is unknown.**

- Visual Inspection at the Meter Pit
- Customer Self-identification
- CCTV Inspection at Curb Box - External
- CCTV Inspection at Curb Box - Internal
- Water Quality Sampling - Targeted
- Water Quality Sampling - Flushed
- Water Quality Sampling - Sequential
- Water Quality Sampling - Other
- Mechanical Excavation
- Vacuum Excavation
- Predictive Modeling
- Other

If "Other", please explain:

2. If "Predictive Modeling", please describe the model and inputs used (or submit as a separate document to DOW):

N/A

3. How did you prioritize locations for service line materials investigations? For example, did you consider environmental justice and/or sensitive populations, did you use predictive modeling, and/or did you target areas with high number of unknowns or LSLs?

Methodology

We began our inventory in the oldest sections of town where lead had the highest chance of being found. Copper service was the most used material on the system side at 76% followed by plastic (20%) then galvanized (4%).

Part 4: Classifying Service Line Materials

Lead = PWS has verified that SL is lead or lead-lined. Does not apply when ONLY the gooseneck or connector attached to the SL is lead.

Galvanized requiring replacement (GRR) = galvanized iron pipe that has been downstream from a lead service line at some time. Does not apply when the only lead upstream from the SL was a lead gooseneck or connector.

Non-lead = Ensure that records are maintained documenting how the PWS determined the SL is non-lead. The DOW highly recommends that water systems indicate the SL material type when known (e.g., plastic, copper, etc.)

Unknown = SL made of unknown material, and PWS has little or no data to indicate what the material is

Unknown-lead unlikely = SL made of unknown or unverified material, but PWS has data to indicate it is not likely to be made of lead

Unknown-lead likely = SL made of unknown or unverified material, but PWS has data to indicate it may be lead

Galvanized-no lead contact = SL is made of galvanized iron and PWS has documents demonstrating that there has never been a LSL upstream from the SL.

Galvanized-unknown if lead contact = SL is made of galvanized iron and PWS has no documents demonstrating whether a LSL was upstream from the SL or not. These must be classified as 'Galvanized requiring replacement' in the final SL count.

Part 5: Verification Methods

Verification method

Documents collected in response to 40 CFR 141.42(d) and 40 CFR 141.86(a) of the 1991 LCR. For example, a list of service lines that may contribute contaminants to drinking water supply or service lines with lead components that were identified while investigating tap sampling locations for lead and copper.

Previous materials evaluation

Documents that indicate installation after 1/1/1988 or after the water system stopped using lead. These may be aerial photos, Board of Realtors records, comprehensive plans, HOA documents, etc. When relevant, maintain supporting documentation demonstrating water system's last use of lead.

Installation date after lead ban/lead use

Methodology

Installation record - water system	Tap cards, distribution system maps, or other records the water system used to document the SL material when installed.
Repair/replacement record	Customer record documenting material during repair or replacement of SL
Municipal record	Construction or plumbing codes, construction or plumbing permits, PVA or tax records, aerial photos, comprehensive plans, ordinances, etc.
Installation record - other	Choose if the installation record is not part of water system records. Customers may have their own records of installation as well.
Distribution system inspection record	Records of distribution system inspections that indicate SL materials
Field/visual inspection by water system staff	Documentation showing SL material visualized by system staff, e.g., through the foundation wall of a residence
Service line diameter >2"	Service lines greater than 2" in diameter are generally not lead
Historic repair/replacement record	Record of SL replacement or repair that indicates material composition; may be one provided by customer. These include work orders or other maintenance documents
Field verified during routine work	Water systems are strongly encouraged to develop processes to record SL materials during routine operations, such as water main repairs/replacement, water meter replacement, etc. Documentation may include SOPs, work orders, or databases recording routine work operations
Field verified by excavation	Mechanical or vacuum excavation for the purpose of identifying service line materials. Water systems should document the procedure(s) used, and are encouraged to maintain a database or list of date, operator, location, etc.
Field verified - visual inspection at meter pit	Where possible, visualize SL material from inside the meter pit (non-excitation)
Visual inspection by customer	Photo, survey, magnet or scratch test affidavit, etc.
Field verified - CCTV	Use of CCTV cameras interior or outside the pipe (e.g., from meter pit) to identify SL. Indicate method used in Part 3 above.
Water sampling	Use of targeted, flushed, or sequential water sampling for lead. Indicate method used in Part 3 above.
Predictive model	Use of a predictive model (based on current knowledge of distribution system).
Multiple records	Choose this if more than one record was required to make the final determination of SL material. List each method used in the 'Other' column on the LSLinventory tab (Column M), or in the 1st and 2nd verification records columns (columns AB, AC, AF, and AG).
Other	Describe the method used in the 'Other' column on the LSLinventory tab (Column M).

Public Accessibility Documentation

PWS Name: Worthington Municipal Water Works

PWSID: KY0450478

Enter Date Last Updated:

10/16/24

Purpose of this worksheet: For systems to provide documentation to DOW on how they met the public accessibility requirements of the LCRR.

1. Select the location identifiers that you use for your service line inventory. Check all that apply.

- Address
- Street
- Block
- Intersection
- Landmark
- GPS Coordinates
- Other

If "Other", please describe:

Account

2. How are you making your inventory publicly accessible? Check all that apply. *Remember that if your system serves > 50,000 people, you must provide the inventory online.*

- Interactive online map
- Static online map
- Online spreadsheet
- Printed service line map
- Printed tabular data
- Information on water utility mailings or newsletter
- Hard copy information available in water system office
- Other

If "Other", please describe:

System-Owned Portion		Customer-Owned Portion	Classification for Entire Service Line
Lead	Lead	Lead	Lead
Lead	Galvanized Requiring Replacement	Lead	Lead
Lead	Non-lead	Lead	Lead
Lead	Lead Status Unknown	Lead	Lead
Non-lead	Lead	Lead	Lead
Non-lead and never previously lead	Non-lead, specifically galvanized pipe material	Non-lead	Non-lead
Non-lead	Non-lead, material other than galvanized	Non-lead	Non-lead
Non-lead	Lead Status Unknown	Lead Status Unknown	Lead Status Unknown
Non-lead, but system is unable to demonstrate it was not previously Lead	Galvanized Requiring Replacement	Galvanized Requiring Replacement	Galvanized Requiring Replacement
Lead Status Unknown	Lead	Lead	Lead
Lead Status Unknown	Galvanized Requiring Replacement	Galvanized Requiring Replacement	Galvanized Requiring Replacement
Lead Status Unknown	Non-lead	Lead Status Unknown	Lead Status Unknown
Lead Status Unknown	Lead Status Unknown	Lead Status Unknown	Lead Status Unknown
